Euronext Sustainability Week

Carbon Tech Removals

Date 07 September 2023,
12:45PM - 14:30PM

EMPOWERING 
SUSTAINABLE GROWTH

THE NEW FRONTIER FOR CLIMATE ACTION

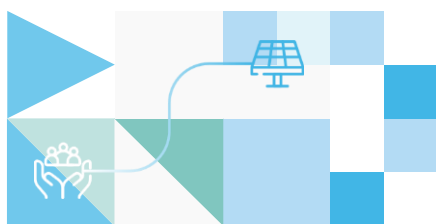

The Intergovernmental Panel on Climate Change 2023 report warns that, although rapid and deep decarbonization of all systems is essential, it will not be enough. To stay in line with Paris Agreement climate goals we will need to remove at least 3 Gt CO₂ emissions per year by 2030.

Developing technologies, expanding demand and increasing investment in tech removal technologies are key to grow a market with the potential to accelerate climate action at an unprecedented scale. With South Pole Global Director, Technology Strategies, Tech Carbon Removals **Philip Moss** and **Guido Alfani**, General Manager, Carbonsink & Head of Southern Europe, Climate Solutions, South Pole, we will understand why tech removals need to be part of our expanding climate solutions portfolio, what's in it for the private sector and what are the challenges and opportunities ahead.
